

How to Install Solidworks

1. Send an email to George Zhang at OASIS and tell him your ONYEN. Have the subject line of the email be 'Solidworks.'
xzhang@email.unc.edu
2. Once your ONYEN is added to the list of people able to access the install image of Solidworks, open up the 'Run' window. 'Run' is accessed by pressing the 'Windows' and 'R' keys simultaneously.
3. You are now ready to install Solidworks. This must be done while you are on campus, connected to the network. Type the following into the 'Run' window and press OK.
\\cas-oa-apps.ad.unc.edu
4. A window prompting you to login will appear.
User- ad\yourONYEN
Pass- YourONYENpassword
So in other words, just add 'ad\' before your ONYEN.
5. Open up the Solidworks folders until you see the following file-
StartSWInstall.hta
6. Double click the file and follow the instructions to install Solidworks.
FYI- The install process will take approximately 30 – 60 minutes, so don't do it unless you have enough time. Also, there are no other windows that pop up during the install so you don't have to baby sit it for the whole 30 – 60 minutes.
